

Alert Logic Threat Manager™

Critical Layer of Network Defense

According to the recent CSI Computer Crime and Security Survey, approximately 97 percent of organizations have perimeter defenses such as firewalls and 98 percent have endpoint defenses such as anti-virus, yet 46 percent continue to experience security breaches. This clearly indicates that internal networks remain at risk, motivating organizations to improve network security and ensure compliance with policies and regulatory mandates.

Alert Logic's Threat Manager solution offers the easiest way to comply with regulations and protect your internal network from attack. Threat Manager is designed to provide a critical layer of network defense against threats that easily bypass perimeter and endpoint defenses – constantly protecting your internal network from viruses, worms, and other threats brought in by roaming laptops, VPN connections, wireless access points, partner portals, and other supposedly “trusted” sources.

Alert Logic Threat Manager helps identify threats and remediate network and host vulnerabilities before they can impact your business.

Alert Logic Threat Manager delivers a critical layer of internal network protection, preventing worms, botnets, Trojans, and other malicious intruders from propagating throughout your network.

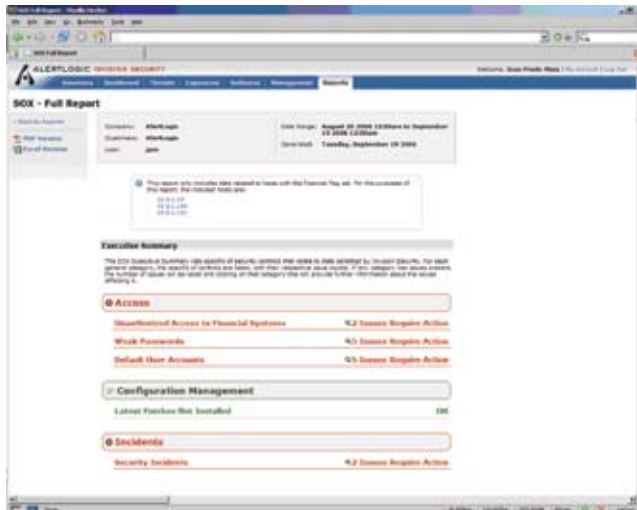

Threat Manager combines intrusion protection and vulnerability management technology into a single integrated solution that offers both proactive and reactive protection from the latest threats. Threat Manager's unique on-demand architecture eliminates the false alarms typically associated with intrusion detection technology. All of the alerts from our network appliance are fed directly into a centralized expert system hosted in our datacenter. The expert system correlates the IDS alert data with vulnerability data and real-time threat trend information from all Alert Logic customers worldwide, and identifies only valid security incidents that threaten your network – something a traditional standalone appliance simply cannot accomplish.

Alert Logic Threat Manager™

Detect and Contain Threats Before They Impact Your Business

Key Benefits

- **Easy to buy, deploy, use, and own** with no software or hardware to purchase or maintain, no upfront investment required, and everything included in one convenient monthly fee
- **Improves network security** by identifying threats and vulnerabilities that evade perimeter and endpoint defenses
- **Enables regulatory compliance** by identifying both incidents and vulnerabilities that could impact compliance-relevant network assets

Alert Logic Threat Manager generates simple, easy-to-view online reports on-demand to assess incidents and vulnerabilities that could impact compliance with regulations and policies.

Key Solution Capabilities

Intrusion Protection

- Leverages over 18,000 threat signatures
- Passively monitors network traffic
- Actively blocks, contains, and quarantines per policy
- Correlates network events, vulnerabilities, and global threat data
- Multi-layered architecture enables superior protection

Vulnerability Management

- Leverages over 22,000 vulnerability checks
- Automated network topology and host discovery
- On-demand scheduling flexibility for both internal and external scanning
- Comprehensive prioritization and resolution workflow management
- Agent-less architecture

Compliance Automation

- PCI certified scanning
- Comprehensive compliance reporting - PCI, GLBA, SOX, and HIPAA
- Identification of incidents impacting compliance posture
- Identification of vulnerabilities impacting compliance posture
