

# ALERT LOGIC® CLOUD INSIGHT™ AND CLOUD INSIGHT™ ESSENTIALS

## AUTOMATED CLOUD EXPOSURE MANAGEMENT FOR AWS

Cloud Insight and Cloud Insight Essentials are AWS-native cloud security services that provide agentless, API-automated controls for configuration assessment, security incident response support and vulnerability scanning.

**Agentless, API-driven technology launches in minutes – no security experience required**

---

**Discover what assets you have, where they are and how they fit together**

---

**See where and how to fix potential configuration mistakes that leave you open to compromise**

---

**Understand why, where and how to react to Amazon GuardDuty findings**

---

**Reduce your attack surface with visibility into vulnerabilities hidden at all layers of your application stack**

### **AWS IS SECURE. HOW YOU USE IT MAY NOT BE.**

AWS secures its infrastructure services but users are responsible for securely configuring services and managing vulnerabilities in the software they deploy there. Yet many workloads on AWS lack basic security controls because “cloud security” solutions are still too slow for DevOps and continuous deployment environments—and too complex when most cloud users aren’t security experts. Best practices for secure AWS configurations are not rocket science but when deployments move at light speed—and across distributed teams—they are surprisingly easy to miss, exposing sensitive data and access points in the process.

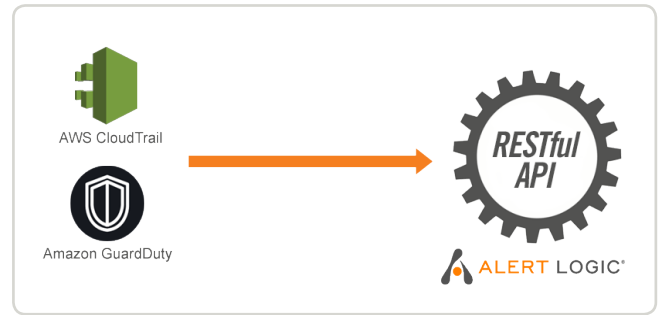

“Cloud Insight makes remediation much easier than practically any other vulnerability management tool I’ve ever seen.”

- Todd Thomas, Information Security Professional at JM Family

## KEY FEATURES AND BENEFITS

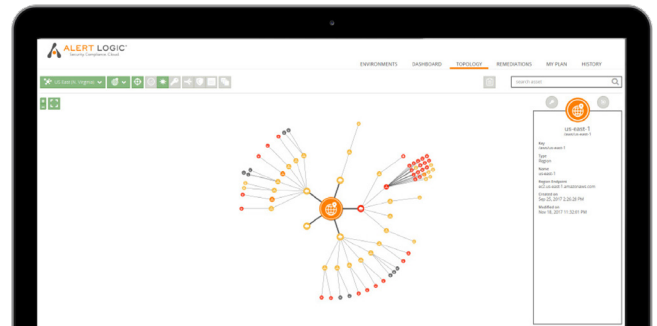

### LAUNCH FRICTIONLESS SECURITY

- No overhead added to your AWS environment
- No-touch automation through AWS APIs and services including CloudTrail and GuardDuty
- REST API Integration with your DevOps toolchain for continuous integration/continuous deployment (CI/CD)

### CONTINUALLY DISCOVER YOUR ASSETS

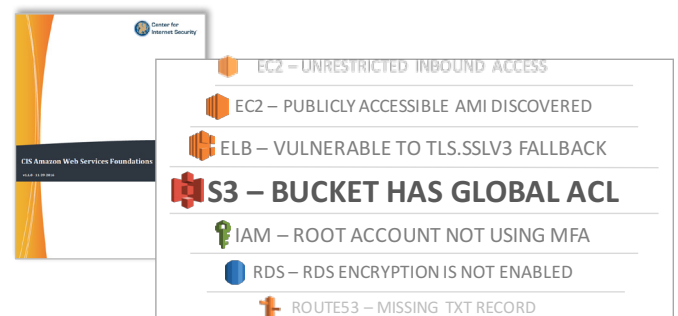

- See real-time inventory of your AWS resources and workloads with auto-discovery
- Understand the potential impact of exposures and incidents through an interactive topology map
- Pivot and search by AMI, Instance ID & Type, IP range, Availability Zone, Tags and Keywords

Understand where to act with a visual topology map of your AWS environment

### ASSESS YOUR AWS CONFIGURATION EXPOSURES

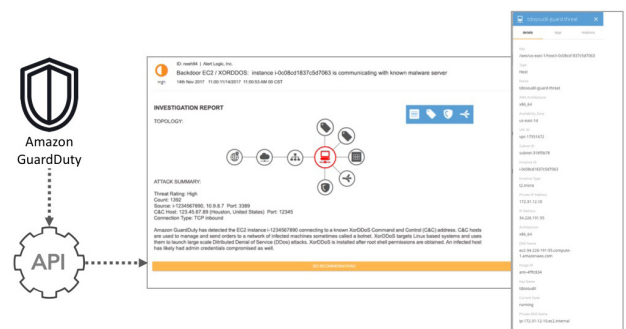

- Assess services and policies as they are created to continuously assess exposure
- Easily comply with CIS AWS Foundations benchmark and best practices
- Follow prioritized remediation steps to improve your security posture

Instantly scan for exposures in misconfigurations in your AWS services, policies and instances

### RESPOND FASTER TO SUSPICIOUS ACTIVITY

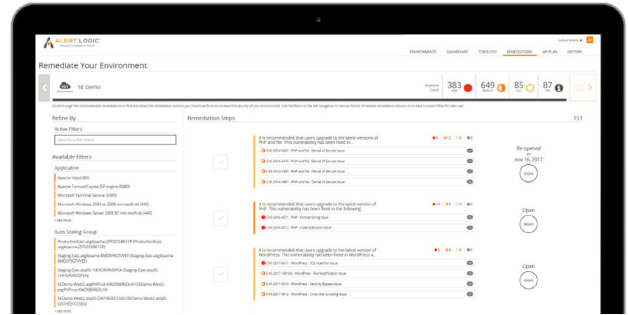

- Get a clear explanation of Amazon GuardDuty findings
- See added details about affected resources such as tags and VPCs
- Recommended responses prioritized by criticality
- Console-based and API-based workflows to initiate, track and resolve incidents

Cloud Insight™ Essentials translates Amazon GuardDuty findings into incidents you can understand, with enriched resource detail and workflow to prioritize and accelerate your responses

## MANAGE YOUR SOFTWARE VULNERABILITIES

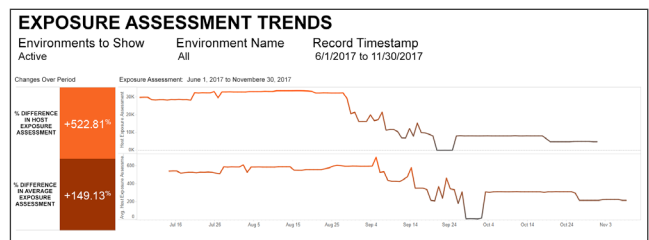

- Available as an in-product upgrade within Cloud Insight™ Essentials
- Checks for 91,000+ vulnerabilities and 8,600+ software configuration issues
- Scanning is pre-authorized by AWS – no need to schedule in advance
- Credentialed and un-credentialed, agentless scans ensure complete analysis

Proposed remediation actions are prioritized based on the criticality and the number of vulnerabilities each action addresses. Duplicate exposures are grouped by AMI(s) that launched them so you can cut through noise to see the root cause.

## SEE YOUR IMPROVEMENTS OVER TIME

- Understand and demonstrate progress over time with dashboards and reports on incidents and exposures by asset, attack type and exposure type

GET STARTED IN MINUTES
UPGRADE TO DEEPER INSIGHT

### Cloud Insight™ Essentials

Show you why, where and how to fix your configuration mistakes that expose you to compromises, and respond to Amazon GuardDuty findings when your environment is under attack.

### Cloud Insight™

Add pre-authorized scanning for 100,000+ third-party software vulnerabilities hidden throughout your application stack.
