

# ALERT LOGIC® ESSENTIALS

*Gain visibility into assets and vulnerabilities across any environment*

Your security and IT teams spend significant time and budget on attack prevention and access control technology. This leaves less time to get visibility into deployed assets, misconfigurations and software vulnerabilities.

Meanwhile, your environments are continually changing, resulting in potentially more vulnerabilities and configuration errors. Ultimately, it's difficult or impossible to ensure remediation of exposures from your entire environment.

Alert Logic Essentials provides visibility into your environments (cloud, on-premises, or hybrid), and helps you identify the remediation steps required to eliminate exposures. You'll be able to automatically track additions, moves, or deletions across your environments. You can also identify exposures in network and service layers that could ultimately lead to a compromise.

## WITH ALERT LOGIC ESSENTIALS, YOU GET:

### ASSET VISIBILITY

Discover and visualize the assets in an environment based on our recurring discovery process. Health of your deployment is monitored and appropriate recommendations about how to improve your deployment are pro-actively provided.

### VULNERABILITY VISIBILITY

Discover and visualize weaknesses in your deployed assets and cloud configuration through internal, external and PCI Scans.

Vulnerability status is projected onto an interactive asset topology. Get interactive reports to monitor, analyze, visualize and share your vulnerability posture and remediation progress.

### ALERT LOGIC ESSENTIALS INCLUDES THE FOLLOWING:

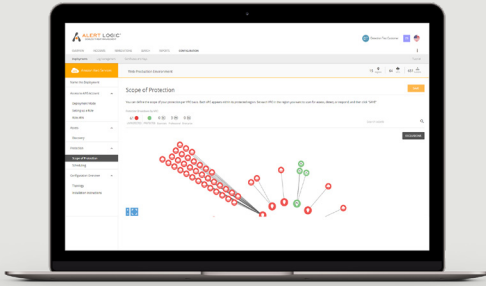

- Asset discovery
- Vulnerability scanning
- Cloud configuration checks
- Threat Risk Index
- Remediation guidance
- Prioritization and next steps
- Comprehensive vulnerability library
- 24/7 email and phone support
- PCI Scanning and ASV support
- Service health monitoring

### THREAT RISK INDEX

Leverage Alert Logic security intelligence tracks vulnerabilities based on their vulnerability score, their proximity to the internet, whether an active exploit for the vulnerability is in the wild, and whether Alert Logic has visibility for attack activity on this vulnerability.

### SUPPORT SERVICES AND PCI SCANNING ASV SUPPORT

Get help with the intricacies of scan scheduling, interpretation of our PCI accredited scan vendor results and working through remediation and exception processes to reach scan PCI compliance.

*“Alert Logic makes remediation much easier than practically any other vulnerability management tool I’ve ever seen. This really makes remediation a simpler process. It’s pretty clear that the people who have designed this have done vulnerability scanning for a living.”*
